Cancer Salves: A Botanical Approach to Treatment Ingrid Naiman

From the Inside Cover:

If you are a health care professional or cancer patient, this book can change the way you view cancer and its treatment.

In the 1950s the use of herbal cancer salves for tumor destruction and removal had a 75 to 80 percent success rate; but with the advent, first of radiation and later of chemotherapy, the method went underground. In this fascinating and useful book, the author demystifies and revives a major natural method of therapy. She provides a complete description of how salves, herbal tonics, and boluses work and why they are reasonable alternatives to the procedures and protocols of modern science. In the historical overview, the author describes the salves and techniques used by leading physicians and natural healers from the Middle Ages onwards.

In the color insert, she shows how tumors are broken down by use of alkaloidal herbal pastes. Different types of cancer salves and herbs are discussed, including pros and cons of salve use and the conditions under which they are safe and appropriate. Case histories and methods are given. In an amazing appendix, the author describes major anti-cancer herbs in considerable detail, and she provides the exact formulae used by famous physicians and practitioners of natural medicine who developed poultices, pastes, and other herbal remedies for cancer. A work of significant historical research alone, *Cancer Salves* makes a convincing case that many cancers are responsive to treatments using botanical escharotics and their adjunctive tonics.
