Fifty Lectures for American Mathematics Competitions: Volume 1 Jane Chen, Yongcheng Chen, Sam Chen, Guiling Chen

While the books in this series are primarily designed for AMC competitors, they contain the most essential and indispensable concepts used throughout middle and high school mathematics. Some featured topics include key concepts such as equations, polynomials, exponential and logarithmic functions in Algebra, various synthetic and analytic methods used in Geometry, and important facts in Number Theory.

The topics are grouped in lessons focusing on fundamental concepts. Each lesson starts with a few solved examples followed by a problem set meant to illustrate the content presented. At the end, the solutions to the problems are discussed with many containing multiple methods of approach.

I recommend these books to not only contest participants, but also to young, aspiring mathletes in middle school who wish to consolidate their mathematical knowledge. I have personally used a few of the books in this collection to prepare some of my students for the AMC contests or to form a foundation for others.

By Dr. Titu Andreescu

US IMO Team Leader (1995 – 2002)

Director, MAA American Mathematics Competitions (1998 – 2003)

Director, Mathematical Olympiad Summer Program (1995 – 2002)

Coach of the US IMO Team (1993 – 2006)

Member of the IMO Advisory Board (2002 – 2006)

Chair of the USAMO Committee (1996 – 2004)

I love this book! I love the style, the selection of topics and the choice of problems to illustrate the ideas discussed. The topics are typical contest problem topics: divisors, absolute value, radical expressions, Veita's Theorem, squares, divisibility, lots of geometry, and some trigonometry. And the problems are delicious.

Although the book is intended for high school students aiming to do well in national and state math contests like the American Mathematics Competitions, the problems are accessible to very strong middle school students.

The book is well-suited for the teacher-coach interested in sets of problems on a given topic. Each section begins with several substantial solved examples followed by a varied list of problems ranging from easily accessible to very challenging. Solutions are provided for all the problems. In many cases, several solutions are provided.

By Professor Harold Reiter

Chair of MATHCOUNTS Question Writing Committee.

Chair of SAT II Mathematics committee of the Educational Testing Service

Chair of the AMC 12 Committee (and AMC 10) 1993 to 2000.

From reader reviews:

Corine Ramirez:

Reading a e-book can be one of a lot of exercise that everyone in the world adores. Do you like reading book thus. There are a lot of reasons why people enjoy it. First reading a e-book will give you a lot of new info. When you read a reserve you will get new information since book is one of various ways to share the information or perhaps their idea. Second, looking at a book will make anyone more imaginative. When you studying a book especially tale fantasy book the author will bring you to imagine the story how the personas do it anything. Third, it is possible to share your knowledge to some others. When you read this Fifty Lectures for American Mathematics Competitions: Volume 1, you may tells your family, friends and soon about yours guide. Your knowledge can inspire others, make them reading a book.

Jennifer Jones:

Do you have something that you want such as book? The e-book lovers usually prefer to opt for book like comic, short story and the biggest an example may be novel. Now, why not attempting Fifty Lectures for American Mathematics Competitions: Volume 1 that give your enjoyment preference will be satisfied through reading this book. Reading practice all over the world can be said as the opportunity for people to know world much better then how they react in the direction of the world. It can't be explained constantly that reading behavior only for the geeky man or woman but for all of you who wants to always be success person. So , for all of you who want to start reading through as your good habit, you can pick Fifty Lectures for American Mathematics Competitions: Volume 1 become your own personal starter.

Walter Feuerstein:

Reading a book to be new life style in this yr; every people loves to examine a book. When you read a book you can get a lot of benefit. When you read books, you can improve your knowledge, simply because book has a lot of information upon it. The information that you will get depend on what sorts of book that you have read. If you would like get information about your study, you can read education books, but if you want to entertain yourself look for a fiction books, these us novel, comics, and also soon. The Fifty Lectures for American Mathematics Competitions: Volume 1 provide you with new experience in reading through a book.

Alice Concannon:

This Fifty Lectures for American Mathematics Competitions: Volume 1 is new way for you who has curiosity to look for some information as it relief your hunger info. Getting deeper you in it getting knowledge more you know or you who still having little bit of digest in reading this Fifty Lectures for American Mathematics Competitions: Volume 1 can be the light food for you because the information inside this kind of book is easy to get by means of anyone. These books produce itself in the form that is reachable by anyone, that's why I mean in the e-book form. People who think that in reserve form make them feel

sleepy even dizzy this reserve is the answer. So you cannot find any in reading a guide especially this one. You can find what you are looking for. It should be here for you actually. So , don't miss the idea! Just read this e-book type for your better life as well as knowledge.
